Physics Lab Exercise
Download and install Phyphox
Br. R.W.Harris

Phyphox is an app that uses the sensors in a smartphone for physics experiments. You can find additional details and examples on the website https://phyphox.org.

Assignment:

Go to

or
And download and install Phyphox on your phone.

When you start Phyphox you will see this screen.

Depending on the type of phone you have, some of the choices will be "greyed out" because your phone does not have the sensor needed for that experiment.

You may choose an available experiment and play around a bit. Note

the controls.

The triangle means start taking data. The garbage can means to discard the data. The three dots will bring up other options.
